Technology used- JavaScript | Node JS | Express JS | Mongo DB

INTENSHIP- AMENSES INNOVATION Backend Web Dev Internship

- Learned and worked with Node.js, Express, and MongoDB to build beginner-level projects. Gained hands-on experience in REST API development, database management, and server-side logic.
- Implemented features for authenticated users to login/signup page, browse, edit, and compose blog posts, a robust image upload feature, enhancing the visual appeal while ensuring synchronization with previous blogs.

LETS TALK Personal Project

link@GITHUB

Technology used- HTML | CSS | JS | REACTJS

Weather App using React.js

Developed a dynamic weather application using React.js, integrating a weather API to fetch real-time weather data for any city. Implemented a responsive UI for an intuitive user experience.

Book Search App – Developed a React.js-based book search application integrating Google Books API to fetch book details, including poster, title, and author. Implemented dynamic search functionality for real-time results.

Movie Search App – Developed a responsive React.js application that allows users to search for movies using an API. Integrated external APIs to fetch and display movie details, including posters, titles, and descriptions. Implemented efficient state management and optimized performance for seamless user experience.

Meme Generator App – Developed a React.js-based meme generator with features like routing, meme editing, and saving functionality. Enhanced user experience with dynamic content manipulation and state management.

ACHIEVEMENTS

- Solved problems on Hackerrank.
- Hackerrank C++ Silver Level.
- Hackerrank Java bronze Level.
- Goole Developer Student Club CODELOGY competition participate
